

Safety Beyond Products

Creating a safer workplace in the new normal

- Manage risks and protect your team with a comprehensive collection of PPE, including products for COVID-19
- Comply with regulatory requirements and safe work practices with products and services that help keep your work site safe
- Tap into the expertise of 70+ QSSP and OSHA 30-certified safety specialists as you adapt your business
- Get access to the products you need via a safe supply chain and large national footprint

Safety is always your priority

Safety comes first at Airgas as well, and we continue to prioritize the safety of our customers, our associates and the communities we serve. We understand that the products and services we deliver daily are vital to the protection of your team. We also know that adapting your business post COVID-19 will require new ways of approaching challenges for your safety program. Airgas, an Air Liquide company, can help. Our team of safety experts—including safety specialists and our Airgas Total Access[®] elite customer service team—have years of experience evaluating and identifying workplace hazards and providing efficient solutions that help you minimize risk. Backed by our comprehensive collection of safety products, national footprint, reliable supply chain and a variety of safe ways to transact, you get the right answers, when and where you need them.

Adapt your operations to promote employee health

We're ready to help now. As we work towards recovery, count on us to help you adapt, manage exposure, and continue to protect your team and your business with a safe and productive work environment.

Gloves

Single-use or disposable gloves are in extremely high demand. Please contact your Airgas representative for more information.

Protective clothing

Disposable and reusable clothing is in extremely high demand. Please contact your Airgas representative for more information.

Respirators

Respirators are in extremely high demand. Please contact your Airgas representative to explore options, including mitigating the risk.

Shared equipment

Review your current shared equipment such as fall protection and arc flash to evaluate cleaning and disinfecting requirements versus outfitting individual employees with their own gear. Contact your Airgas representative to discuss.

Safety comes first at Airgas

We're all working towards the same goal right now: safely adapting business while protecting the health of our teams and our customers. Implementing new safety measures are just the beginning of our new normal—these safety protocols are long-term and will need to be strictly maintained for the foreseeable future to be effective. Airgas is ready to help you navigate—with years of safety experience and an expanded portfolio of safety products.

We are well-prepared to help

We can assure that we have initiated practices to help safely transfer product from us to you, both nationally and locally.

At Airgas operations

- Daily wellness checks are proactively in place for our team
- Appropriate face coverings are worn
- Physical distancing measures, hand washing and disinfecting, maximum occupancy limits, and more
- Limiting signed deliveries to decrease contact

At Airgas retail stores

- Curbside service is available for order pickup
- Physical safeguards are in place to maintain social distances
- High-touch surfaces are disinfected throughout the day

Managing our supply chain so you can manage yours

In these times of uncertainty and constant flux, you can count on us for guidance when selecting the right safety products and services you need to maintain a safe workplace.

- Large national footprint with over 1,400 locations
- Six strategically located distribution centers
- Robust supply chain tools including reorder and inventory management via Airgas.com

We are working closely with our suppliers to manage the extraordinary demand generated by COVID-19 for PPE and to maintain dependable distribution to our customers. We continue to proactively manage our supply chain as we anticipate some product inventory will prove difficult to quickly replenish. We increase our inventory when possible, seek alternative supply sources, and identify product substitutions where feasible. Additionally, we systematically track product quality per supplier, identify suppliers whose supply chain may be at risk, and continue to take steps to mitigate any risk.

To connect with an Airgas safety specialist to perform a safety assessment of your worksite, contact us at 855.625.5285
