National Carbonation™

## Nitrogen Generator

### Airgas National Carbonation Nitro-Draught™ System

The Nitro-Draught™ System has helped to improve the profitability and quality of draught systems by up to 50% and saved dozens of bottles of wine per month at our customers that serve draught beer and have a wine by the glass program.

#### How it Works

The Nitro-Draught™ System is comprised of a nitrogen gas generator which, when connected to a Bulk CO<sub>2</sub> tank, can produce fully customized blends of N<sub>2</sub> & CO<sub>2</sub>. High purity nitrogen is stored in the included surge vessel for use in wine dispense, BIB or Beer pumps, etc. UL® listed with industry leading CMS technology, the Nitro-Draught™ System creates nitrogen from ambient air and stores it in a vessel at the minimum nitrogen purity of 99.8%. Nitrogen from the storage vessel is then blended with CO<sub>2</sub> to provide a very specific and consistent gas mixture especially designed for the application. Whether for a local pub, stadium, winery or brewery, the Nitro-Draught™ will be the perfect fit.

#### The Nitro-Draught System™ gives the added benefits of:

##### Saving Money

- Lower nitrogen cost per standard cubic feet (scf)
- No cylinder rental, delivery, or hazmat charges

##### Gaseous Nitrogen on Demand

- No cylinder storing, monitoring, or ordering

##### Safety

- Eliminate cylinder handling
- No high pressure cylinders on site

##### Simplified Inventory Management

##### Maximizing Available Space

Contact Airgas National Carbonation today. You'll find that managing your carbonation supply can be... refreshingly easy.
